UCSF Building Seismic Ratings

1326 3RD AVENUE

CAAN #2276
1326 3rd AVENUE, SAN FRANCISCO, CA 94122
UCSF Campus: Parnassus

Plan

West Elevation

Rating summary	Entry	Notes
UC Seismic Performance Level (rating)	V	Findings based on drawing review and ASCE 41-17 Tier 1 evaluation[1]
Rating basis	Tier 1	ASCE 41-17
Date of rating	2020	
Recommended UCSF priority category for retrofit	Priority B	Priority A = Retrofit ASAP Priority B=Retrofit at next permit application for modification
Ballpark total project cost to retrofit to IV rating	High	See recommendations on further evaluation and retrofit.
Is 2018-2019 rating required by UCOP?	Yes	
Further evaluation recommended?	No	

[1] The evaluations at UCSF translate the Tier 1 evaluation to a Seismic Performance Level rating using professional judgment discussed among the Seismic Review Committee. Non-compliant items in the Tier 1 evaluation do not automatically put a building into a particular rating category, but such items are evaluated along with the combination of building features and potential deficiencies, focused on the potential for collapse or serious damage to the gravity supporting structure that may threaten occupant safety.

Building information used in this evaluation

- Architectural Floor Plans, "1326 3RD Avenue," dated 31 July 1974 (1 Sheet)
- Architectural Drawings by Scheinhotz Associates and VDK Architects, "UCSF Housing 1326 3rd Ave. San Francisco, CA," dated 30 November 1990 (6 sheets).
- Architectural Drawings, "1326 Third Avenue Cosmetic Upgrades," dated 1 June 2006 (3 sheets).

Scope for completing this form

Architectural drawings were reviewed and an ASCE 41-17 Tier 1 evaluation was performed. A site visit was made on December 5, 2019 where the building exterior and garage space were observed. Access to other portions of the building was not available.

Brief description of structure

The building functions as graduate student housing. It was reportedly built in 1912 as a single-family home. There is an apartment on the first and second floors over a basement with garage. The main floor plate is approximately 49 ft north-south by 25 ft east-west.

Identification of Levels: Levels are identified on plan as Basement, First Floor, Second Floor, and Attic. The site slopes downward toward the north. The basement (approximately 10'-0") contains a garage to the northeast and utilities to the west. The first floor (approximately 10'-6") consists of a kitchen, living room, dining room, foyer, bedroom, and bathroom. The second floor (approximately 10'-6") consists of four bedrooms and two bathrooms. The attic (approximately 8'-0") is open and not accessible to students. It extends over approximately the front 16'-9" of the building. A door at the east side provides access to the roof over Level 2. The front of the attic is sloped to match adjacent properties. The roof is otherwise flat. The basement/garage is at grade/street level and is used as the base of the building for this evaluation.

Foundation system: Existing foundation drawings are not available. It is presumed there are continuous footings below bearing walls. During the site visit on December 5, 2019, continuous concrete stem wall footings were observed around the ground floor level.

Structural system for vertical (gravity) load: Drawings showing the existing framing are not available. It is presumed based on the age of the building that wood joists span to load bearing wood framed walls.

Structural system for lateral forces: Drawings showing the existing framing are not available. It is presumed based on the age of the building that a sheathed diaphragm distributes load to the interior and exterior wood-framed walls sheathed with gypsum board and/or plaster. There was a ceiling in the garage space, so it could not be determined if the sheathing in the first floor was straight or diagonal. Diagonal sheathing was found on the exterior of the street-side garage wall. Where visible, straight wall sheathing was found on the side walls. No mudsill bolts were observed. The cripple wall windows on the rear wall have been sheathed with plywood and unknown nailing.

Building Code: The building was reportedly constructed in 1912, prior to a building code being enacted. However, no documentation was available to confirm the construction date.

Building Condition: What could be observed of the building structure appeared to be in fair condition; however, most of the structure was concealed behind finishes. The wood around some windows had degraded. The stem wall concrete was poorly consolidated and there is extensive efflorescence and some spalling, especially at the rear of the basement. The exterior patio and stair on the south side of the house were in good condition, including the connector hardware.

Building response in 1989 Loma Prieta Earthquake: The report titled "Performance of UCSF Buildings During the October 17, 1989 Loma Prieta Earthquake" by Impell Corporation stated the exterior and interior of the building was inspected after the earthquake and no damage was observed.

Brief description of seismic deficiencies and expected seismic performance including structural behavior modes

- The building relies on interior and exterior walls for shear resistance. There is not enough wall present to pass the Tier 1 quick check in the transverse or longitudinal direction in any story.
- Based on the age of construction, the walls between levels are not expected to be detailed to transfer shear and overturning forces between levels.
- The building is located on a sloped site. However, there is a significant length of wall on the downhill side of the building.
- The building is built to the property line with virtually no separation between the neighboring buildings to the north and south. The floor levels do not align with the adjacent buildings due to the sloped site.
- The garage cripple walls were primarily sheathed with plaster and gypsum board. Where sheathing could be observed, it was straight on the side walls and diagonal on the street-side wall. No mudsill bolts were observed.

Structural deficiency	Affects rating?	Structural deficiency	Affects rating?
Lateral system stress check (wall shear, column shear or flexure, or brace axial as applicable)	Y	Openings at shear walls (concrete or masonry)	N
Load path	Y	Liquefaction	N
Adjacent buildings	Y	Slope failure	N
Weak story	Y	Surface fault rupture	N
Soft story	N	Masonry or concrete wall anchorage at flexible diaphragm	N
Geometry (vertical irregularities)	N	URM wall height-to-thickness ratio	N
Torsion	N	URM parapets or cornices	N
Mass – vertical irregularity	N	URM chimney	N
Cripple walls	Y	Heavy partitions braced by ceilings	N
Wood sills (bolting)	Y	Appendages	N
Diaphragm continuity	N		

Summary of review of non-structural life-safety concerns, including at exit routes. [2]

The facilities maintenance technician assisting with the site visit noted that the building does not have a fireplace.

Anchorage or bracing of the basement water heater and furnace was not observed. The furnace did have a flexible connection to the gas line.

UCOP non-structural checklist item	Life safety hazard?	UCOP non-structural checklist item	Life safety hazard?
Heavy ceilings, feature or ornamentation above large lecture halls, auditoriums, lobbies or other areas where large numbers of people congregate	None Observed	Unrestrained hazardous materials storage	None Observed
Heavy masonry or stone veneer above exit ways and public access areas	None Observed	Masonry chimneys	None Observed
Unbraced masonry parapets, cornices or other ornamentation above exit ways and public access areas	None Observed	Unrestrained natural gas-fueled equipment such as water heaters, boilers, emergency generators, etc.	Observed in basement

Basis of Seismic Performance Level Rating

The length of wall in the subject building is well below the amount required by the ASCE 41 Tier 1 procedures, and connections between walls between levels of the building and to the foundation are not adequate for resisting

[2] For these Tier 1 evaluations, we do not visit all spaces of the building; we rely on campus staff to report to us their understanding of if and where non-structural hazards may occur.

seismic loading. The building is listed as Priority B because there is a relatively low risk to occupant life-safety posed by conventional wood-framed construction.

Recommendations for further evaluation or retrofit

No further evaluation of this building is recommended. There is relatively low risk to occupant life-safety posed by this type of building based on historical performance of similar building types. It is recommended that work to improve the seismic performance of the building be included with any future renovation requiring a building permit.

Peer review comments on rating

The structural members of the UCSF Seismic Review Committee (SRC) reviewed the evaluation on January 8, 2020 and are unanimous that the rating is V.

Additional building data	Entry	Notes
Latitude	37.76389

ASCE 41- 17 Tier 1 Checklists (Structural)

UC Campus:	San Francisco			Date:	4/8/2020		
Building CAAN:	2276	Auxiliary CAAN:		By Firm:	Estructure		
Building Name:	1326 3rd Avenue			Initials:	*AJS*	Checked:	*MTP*
Building Address:	1326 3rd Avenue, San Francisco, CA 94122			Page:	1	of	3

ASCE 41-17
Collapse Prevention Basic Configuration Checklist

LOW SEISMICITY

BUILDING SYSTEMS - *GENERAL*

C	NC	N/A	U	Description
○	◉	○	○	LOAD PATH: The structure contains a complete, well-defined load path, including structural elements and connections, that serves to transfer the inertial forces associated with the mass of all elements of the building to the foundation. (Commentary: Sec. A.2.1.1. Tier 2: Sec. 5.4.1.1) **Comments:** Based on the age of construction, it is presumed detailing does not provide transfer of forces between walls and between levels of the building.
○	◉	○	○	ADJACENT BUILDINGS: The clear distance between the building being evaluated and any adjacent building is greater than 0.25% of the height of the shorter building in low seismicity, 0.5% in moderate seismicity, and 1.5% in high seismicity. (Commentary: Sec. A.2.1.2. Tier 2: Sec. 5.4.1.2) **Comments:** Buildings to the north and south are built to or close to the property line, with minimal separation from the subject building.
○	○	◉	○	MEZZANINES: Interior mezzanine levels are braced independently from the main structure or are anchored to the seismic-force-resisting elements of the main structure. (Commentary: Sec. A.2.1.3. Tier 2: Sec. 5.4.1.3) **Comments:**

BUILDING SYSTEMS - *BUILDING CONFIGURATION*

C	NC	N/A	U	Description
○	◉	○	○	WEAK STORY: The sum of the shear strengths of the seismic-force-resisting system in any story in each direction is not less than 80% of the strength in the adjacent story above. (Commentary: Sec. A2.2.2. Tier 2: Sec. 5.4.2.1) **Comments:** In the transverse direction (north-south), the capacity of walls in the ground and first floors is 48% and 70% of the capacity of wall in the story above, respectively.
○	◉	○	○	SOFT STORY: The stiffness of the seismic-force-resisting system in any story is not less than 70% of the seismic-force-resisting system stiffness in an adjacent story above or less than 80% of the average seismic-force-resisting system stiffness of the three stories above. (Commentary: Sec. A.2.2.3. Tier 2: Sec. 5.4.2.2) **Comments:** In the transverse direction (north-south), the capacity of walls in the ground and first floors is 48% and 70% of the capacity of wall in the story above, respectively.

ASCE 41-17
Collapse Prevention Basic Configuration Checklist

C	NC	N/A	U	
○	◉	○	○	VERTICAL IRREGULARITIES: All vertical elements in the seismic-force-resisting system are continuous to the foundation. (Commentary: Sec. A.2.2.4. Tier 2: Sec. 5.4.2.3) **Comments:** Some walls are discontinuous between the ground and first story.
◉	○	○	○	GEOMETRY: There are no changes in the net horizontal dimension of the seismic-force-resisting system of more than 30% in a story relative to adjacent stories, excluding one-story penthouses and mezzanines. (Commentary: Sec. A.2.2.5. Tier 2: Sec. 5.4.2.4) **Comments:**
◉	○	○	○	MASS: There is no change in effective mass of more than 50% from one story to the next. Light roofs, penthouses, and mezzanines need not be considered. (Commentary: Sec. A.2.2.6. Tier 2: Sec. 5.4.2.5) **Comments:**
◉	○	○	○	TORSION: The estimated distance between the story center of mass and the story center of rigidity is less than 20% of the building width in either plan dimension. (Commentary: Sec. A.2.2.7. Tier 2: Sec. 5.4.2.6) **Comments:**

MODERATE SEISMICITY (COMPLETE THE FOLLOWING ITEMS IN ADDITION TO THE ITEMS FOR LOW SEISMICITY)

GEOLOGIC SITE HAZARD

	Description
C ◉ NC ○ N/A ○ U ○	LIQUEFACTION: Liquefaction-susceptible, saturated, loose granular soils that could jeopardize the building's seismic performance do not exist in the foundation soils at depths within 50 ft (15.2m) under the building. (Commentary: Sec. A.6.1.1. Tier 2: 5.4.3.1) **Comments:**
C ◉ NC ○ N/A ○ U ○	SLOPE FAILURE: The building site is located away from potential earthquake-induced slope failures or rockfalls so that it is unaffected by such failures or is capable of accommodating any predicted movements without failure. (Commentary: Sec. A.6.1.2. Tier 2: 5.4.3.1) **Comments:**

Note: **C =** Compliant **NC =** Noncompliant **N/A =** Not Applicable **U =** Unknown

MODERATE SEISMICITY (COMPLETE THE FOLLOWING ITEMS IN ADDITION TO THE ITEMS FOR LOW SEISMICITY)

GEOLOGIC SITE HAZARD

C	NC	N/A	U	
◉	○	○	○	SURFACE FAULT RUPTURE: Surface fault rupture and surface displacement at the building site are not anticipated. (Commentary: Sec. A.6.1.3. Tier 2: 5.4.3.1) **Comments:**

HIGH SEISMICITY (COMPLETE THE FOLLOWING ITEMS IN ADDITION TO THE ITEMS FOR MODERATE SEISMICITY)

FOUNDATION CONFIGURATION

C	NC	N/A	U	Description
○	◉	○	○	OVERTURNING: The ratio of the least horizontal dimension of the seismic-force-resisting system at the foundation level to the building height (base/height) is greater than $0.6S_a$. (Commentary: Sec. A.6.2.1. Tier 2: Sec. 5.4.3.3) **Comments:** 0.6 Sa = 0.6 * 1.86 = 1.12 Base = 25 ft; height = 35 ft Base/Height = 0.71 < 1.12
○	○	◉	○	TIES BETWEEN FOUNDATION ELEMENTS: The foundation has ties adequate to resist seismic forces where footings, piles, and piers are not restrained by beams, slabs, or soils classified as Site Class A, B, or C. (Commentary: Sec. A.6.2.2. Tier 2: Sec. 5.4.3.4) **Comments:** Site class C.

Note: **C =** Compliant **NC =** Noncompliant **N/A =** Not Applicable **U =** Unknown

ASCE 41-17
Collapse Prevention Structural Checklist For Building Type W1-W1A

LOW AND MODERATE SEISMICITY

SEISMIC-FORCE-RESISTING SYSTEM

C	NC	N/A	U	Description
●	○	○	○	REDUNDANCY: The number of lines of shear walls in each principal direction is greater than or equal to 2. (Commentary: Sec. A.3.2.1.1. Tier 2: Sec. 5.5.1.1) **Comments:**
○	●	○	○	SHEAR STRESS CHECK: The shear stress in the shear walls, calculated using the Quick Check procedure of Section 4.4.3.3, is less than the following values: (Commentary: Sec. A.3.2.7.1. Tier 2: Sec. 5.5.3.1.1) Structural panel sheathing: 1,000 lb/ft (14.6 kN/m) Diagonal sheathing: 700 lb/ft (10.2 kN/m) Straight sheathing: 100 lb/ft (1.5 kN/m) All other conditions: 100 lb/ft (1.5 kN/m) **Comments:** Walls in the transverse and longitudinal direction of any floor do not pass the quick check stress check. At the ground floor the wall stresses in the quick check are 600 plf in the east-west direction and 2,802 plf in the north-south direction compared with the allowable 100 plf.
●	○	○	○	STUCCO (EXTERIOR PLASTER) SHEAR WALLS: Multi-story buildings do not rely on exterior stucco walls as the primary seismic-force-resisting system. (Commentary: Sec. A.3.2.7.2. Tier 2: Sec. 5.5.3.6.1) **Comments:** Only the second level of the west exterior wall is covered in stucco. This wall is not counted as a shear wall
○	●	○	○	GYPSUM WALLBOARD OR PLASTER SHEAR WALLS: Interior plaster or gypsum wallboard is not used for shear walls on buildings more than one story high with the exception of the uppermost level of a multi-story building. (Commentary: Sec. A.3.2.7.3. Tier 2: Sec. 5.5.3.6.1) **Comments:** Interior plaster or gypsum walls provide much of the shear resistance, particularly in the transverse (north-south) direction.
○	●	○	○	NARROW WOOD SHEAR WALLS: Narrow wood shear walls with an aspect ratio greater than 2-to-1 are not used to resist seismic forces. (Commentary: Sec. A.3.2.7.4. Tier 2: Sec. 5.5.3.6.1) **Comments:** Some of the walls considered for the quick check have an aspect ratio greater than 2 to 1.

ASCE 41-17
Collapse Prevention Structural Checklist For Building Type W1-W1A

C	NC	N/A	U	
○	◉	○	○	WALLS CONNECTED THROUGH FLOORS: Shear walls have an interconnection between stories to transfer overturning and shear forces through the floor. (Commentary: Sec. A.3.2.7.5. Tier 2: Sec. 5.5.3.6.2) **Comments:** Existing drawings showing wall details are not provided, but it is presumed there are no ties between floors to transfer load between floors.
◉	○	○	○	HILLSIDE SITE: For structures that are taller on at least one side by more than one-half story because of a sloping site, all shear walls on the downhill slope have an aspect ratio less than 1-to-1. (Commentary: Sec. A.3.2.7.6. Tier 2: Sec. 5.5.3.6.3) **Comments:** While the street in which the structure is located slopes, it does not appear the change in elevation across the transverse direction of the building is greater than one-half story.
○	◉	○	○	CRIPPLE WALLS: Cripple walls below first-floor-level shear walls are braced to the foundation with wood structural panels. (Commentary: Sec. A.3.2.7.7. Tier 2: Sec. 5.5.3.6.4) **Comments:** Plywood sheathing was only observed at the rear cripple wall with unknown nailing. Based on the age of construction, available existing drawings, and site observations, cripple walls are not appreciably braced with wood structural panels.
○	◉	○	○	OPENINGS: Walls with openings greater than 80% of the length are braced with wood structural panel shear walls with aspect ratios of not more than 1.5-to-1 or are supported by adjacent construction through positive ties capable of transferring the seismic forces. (Commentary: Sec. A.3.2.7.8. Tier 2: Sec. 5.5.3.6.5) **Comments:** The ground floor front wall has significant openings for the garage door. There are no wood structural panels present.

CONNECTIONS

C	NC	N/A	U	Description
○	◉	○	○	WOOD POSTS: There is a positive connection of wood posts to the foundation. (Commentary: Sec. A.5.3.3. Tier 2: Sec. 5.7.3.3) **Comments:** Wood posts observed did not have positive connection to the foundation.
○	◉	○	○	WOOD SILLS: All wood sills are bolted to the foundation. (Commentary: Sec. A.5.3.4. Tier 2: Sec. 5.7.3.3) **Comments:** Most wood sills in the basement space were concealed by plaster. Where exposed, sills did not have any bolting. Based on the age of the building, any existing bolting elsewhere is likely not adequate.
○	◉	○	○	GIRDER-COLUMN CONNECTION: There is a positive connection using plates, connection hardware, or straps between the girder and the column support. (Commentary: Sec. A.5.4.1. Tier 2: Sec. 5.7.4.1) **Comments:** Girders observed were not positively connected to columns.

ASCE 41-17
Collapse Prevention Structural Checklist For Building Type W1-W1A

HIGH SEISMICITY (COMPLETE THE FOLLOWING ITEMS IN addition TO THE ITEMS FOR LOW AND MODERATE SEISMICITY)

CONNECTIONS

C	NC	N/A	U	Description
○	◉	○	○	WOOD SILL BOLTS: Sill bolts are spaced at 6 ft or less with acceptable edge and end distance provided for wood and concrete. (Commentary: Sec. A.5.3.7. Tier 2: Sec. 5.7.3.3) **Comments:** Most wood sills in the basement space were concealed by plaster. Where exposed, sills did not have any bolting. Based on the age of the building, any existing bolting elsewhere is not adequate.

DIAPHRAGMS

C	NC	N/A	U	Description
◉	○	○	○	DIAPHRAGM CONTINUITY: The diaphragms are not composed of split-level floors and do not have expansion joints. (Commentary: Sec. A.4.1.1. Tier 2: Sec. 5.6.1.1) **Comments** No split levels or expansion joints.
○	○	○	◉	ROOF CHORD CONTINUITY: All chord elements are continuous, regardless of changes in roof elevation. (Commentary: Sec. A.4.1.3. Tier 2: Sec. 5.6.1.1) **Comments:** Chords are at one elevation. However, existing drawings showing splice details are not available.
○	◉	○	○	STRAIGHT SHEATHING: All straight-sheathed diaphragms have aspect ratios less than 2-to-1 in the direction being considered. (Commentary: Sec. A.4.2.1. Tier 2: Sec. 5.6.2) **Comments:** Maximum Aspect Ratio = 50 ft : 25 ft.
○	◉	○	○	SPANS: All wood diaphragms with spans greater than 24 ft (7.3 m) consist of wood structural panels or diagonal sheathing. (Commentary: Sec. A.4.2.2. Tier 2: Sec. 5.6.2) **Comments:** Existing drawings showing roof sheathing are not available. It is presumed the diaphragm has straight sheathing based on the age of construction. There is only one span that is greater than 24ft, which is at level 1 over the utility space.
○	◉	○	○	DIAGONALLY SHEATHED AND UNBLOCKED DIAPHRAGMS: All diagonally sheathed or unblocked wood structural panel diaphragms have horizontal spans less than 40 ft (12 m) and have aspect ratios less than or equal to 4-to-1. (Commentary: Sec. A.4.2.3. Tier 2: Sec. 5.6.2) **Comments:** The diaphragm over the basement spans more than 40 ft.

Floor Assembly				
Flooring		2	*psf*	*Estimate, Assume Carpet*
Sheathing		3	*psf*	*Estimate, Assumed 1x Sheathing*
Wood Framing		6	*psf*	*Estimate, Assumed 2x10 @16*
Ceilings		2.25	*psf*	*Estimate, 5/8" Gyp Board*
MEP		0.5	*psf*	
Misc		0.5	*psf*	
Walls		*10*	*psf*	
Total	∑	**24**	**psf**	

Exterior Wall Assembly - Wood Siding				
Finish		2	*psf*	*Estimate, Wood Siding*
Sheathing		3	*psf*	*Estimate, Assumed 1x Sheathing*
Wood Framing		1.5	*psf*	*Estimate, Assumed 2x6 @16*
Insulation		0.5	*psf*	*Estimate, 5/8" Gyp Board*
Interior Finish		2.25	*psf*	*Estimate, 5/8" Gyp Board*
MEP		0.5	*psf*	
Misc		0.5	*psf*	
Total	∑	**10**	**psf**	

Exterior Wall Finish - Stucco				
Finish		10	*psf*	*Estimate, Stucco, less wood siding*
		-2	*psf*	*Less wood siding*
Total	∑	**8**	**psf**	Add to typical ext. wall assembly, where occurs

Exterior Wall Finish - Brick Veneer				
Finish		39	*psf*	*Estimate, Brick Veneer*
		-2	*psf*	*Less wood siding*
Total	∑	**37**	**psf**	Add to typical ext. wall assembly, where occurs

Level 4 (Attic Roof)			
Roof Assembly	p	27 *psf*	
	A	400 ft^2	*Approximate footprint*
	Wt	**10.80** ***kips***	
Exterior Wall - Wood	p	10 *psf*	
	h_{trib}	8 *ft*	*Approximate floor height*
	L	82 *ft*	
	Wt	**6.73** ***kips***	
Seismic Weight	ΣW_{typ}	**18 kips**	

Level 3 (Attic Floor and Level 2 Roof)			
Roof Assembly	p	27 *psf*	
	A	850 ft^2	
	Wt	**22.95** ***kips***	
Floor Assembly	p	24 *psf*	
	A	400 ft^2	
	Wt	**9.70** ***kips***	
Exterior Wall - Wood	p	10 *psf*	
	h_{trib}	10 *ft*	*Approximate floor height*
	L	148 *ft*	
	Wt	**15.18** ***kips***	
Seismic Weight	ΣW_{typ}	**48 kips**	

Level 2			
Floor Assembly	p	24 *psf*	
	A	1250 ft^2	
	Wt	**30.31** ***kips***	
Exterior Wall - Wood	p	10 *psf*	
	h_{trib}	10 *ft*	*Approximate floor height*
	L	148 *ft*	
	Wt	**15.18** ***kips***	
Exterior Wall - Stucco	p	8 *psf*	*Along front wall only*
	h_{trib}	5 *ft*	*Half approximate floor height*
	L	25 *ft*	
	Wt	**1.00** ***kips***	
Seismic Weight	ΣW_{typ}	**46 kips**	

Level 1				
Floor Assembly	p	24	*psf*	
	A	1250	*ft*^{2}	
	Wt	**30.31**	***kips***
